

## STATEMENT OF PURPOSE

I Karan Gharatkar take this opportunity to briefly express my career objectives and also shed light on my educational background. I wish to embark on higher studies in my proposed field of interest.

I have successfully completed my Bachelor of Commerce in the year 2009. I have decided to pursue my Masters of Business Administration. This decision will shape the future course of my education. My decision to embrace the fine profession of Management studies has been the results of numerous influences. The most significant influence in my life has been of my parents. Ever since my childhood they have encouraged me to read more, know more and learn more.

My interest in social, my energy, passion, assertiveness & creativity gives me a very strong footing to pursue MBA at foreign University.

Pursuing an MBA degree will not only equip me with academic qualification but at the same time will provide me the ability of multi-tasking which is extremely important in today's world. If I opt for an MBA programme in abroad I get an opportunity to know different people from different countries. This would further enable me to even improve my communication skills as well.

I believe studying in UK will give me a Global Exposure in the field of management that every management student needs to have and would be an asset for me to invest in my work. I see many alternatives at professional front in India after completion of my UK studies. Multinationals and corporate need professional and well groomed individuals preferably with an international exposure to head the department and an MBA from UK would definitely enable me to meet the today's business challenges.
